EC: Fisheries Tensions with USSR

25X1

[REDACTED] //EC foreign ministers agreed last week to exclude Soviet, East German, and Polish fishing trawlers from the EC's 200-nautical-mile zone after February 1 if those countries refuse to enter into negotiations with the Community on long-term fishing agreements.//

25X1

[REDACTED] //Individual EC members will be responsible for enforcing the decision on behalf of the Community. It is doubtful, however, that the Nine can patrol the entire 200-nautical-mile zone effectively.//

25X1

[REDACTED] //According to EC officials, the Soviets and the East Europeans not only have ignored temporary three-month quotas imposed by the EC on January 1, but have increased fishing operations in EC waters. In two weeks, they came close to exceeding the temporary quotas, which were to have covered the period pending the negotiation of long-term agreements.//

25X1

[REDACTED] //The EC will require the Soviet Union, East Germany, and Poland to designate which ships have been fishing in EC waters and their catch so far this year. If a state agrees before February 1 to enter into negotiations with the Community, a limited number of boats will then be allowed to continue fishing in EC waters. Any catches in excess of the temporary quotas would be deducted from annual quotas once they are negotiated with the Community.//

25X1

[REDACTED] //The Nine, while anxious to avoid a confrontation with the Soviets over this issue, apparently felt compelled to take strong action given the exclusion of some EC fishermen from other states' 200-nautical-mile zones in the North Atlantic and the North Sea and the urgent need to conserve fish stocks in their own waters.//

25X1

[REDACTED] //East Germany and Poland had indicated previously that they would negotiate fishing agreements with individual Community members, but the Nine have insisted that the EC Commission is the only body empowered to conduct such negotiations.//

USSR: CEMA Cosmonauts

25X1

[] The USSR apparently has begun training the first contingent of CEMA cosmonaut trainees for joint missions on Salyut-class space stations. Prospective cosmonauts from Czechoslovakia, Poland, and East Germany arrived at Zvezknoy Gorodok,

25X1

Approved For Release 2004/12/21 : CIA-RDP79T00975A029700010037-2

the Soviet cosmonaut training center, in late December, and those from Bulgaria, Hungary, Cuba, Mongolia, and Romania are scheduled to come this year.

25X1 [] The joint missions apparently are intended to foster an atmosphere of fraternal cooperation among CEMA countries. They may also provide useful data for the development of earth resources.

25X1 [] The Soviets have said such missions could begin as early as 1978, but we believe this will not give them enough time to integrate trainees of dissimilar background and language. In order to launch cosmonauts from CEMA as soon as possible, the USSR may initially limit them to conducting scientific experiments and not permit them to perform crew functions on board the space station.

25X1 [] If the Soviets could conduct the first manned flights in this program in 1978, it would give them a lead of several years on the joint US-European program for multinational space crews. The US space shuttle is scheduled to orbit a European spacelab and crew in the 1980s.

25X1 [] The ambitious joint scientific space station program was officially announced in September 1976 during the flight of Soyuz 22, which the Soviets hailed as the first flight in a new series of cooperative manned space flights with CEMA countries. According to the announcement, the multinational program will continue through 1983.

25X1 [] Prior to the introduction of CEMA cosmonauts into actual flight, we expect to see flights involving equipment--but not cosmonauts--from the CEMA countries. Soyuz 22, for example, had photographic equipment of East German manufacture.

25X1 [] The cosmonauts from CEMA countries will probably follow the type of training program used to train Soviet cosmonauts. The first phase of the program involves physical conditioning and technical preparation of each cosmonaut candidate. The second phase involves training cosmonaut crews for specific flights and may last up to five months depending on the complexity of the flight. If the CEMA candidates are similar in caliber to past Soviet candidates, the program should be able to provide an adequate corps of cosmonauts.

25X1

25X1

 We do not know whether the joint program is intended to supersede the current Soviet scientific space station program. The Soviet manned military space program apparently will remain a separate program.
